

Digital Literacy Project Report

Name: Udit Sharma

Reg No.:25BAI10827

Branch: B.Tech(AI,ML)

Year: First Year Course Code: CSE0001

Date: 25-March 2026

Introduction

This project focuses on developing essential digital literacy skills required for students in today's technology-driven world. As a Digital Ambassador, I explored various platforms, tools, and practices that help students build a professional identity, communicate effectively, and stay safe online.

Through five structured tasks, I learned about digital awareness, portfolio creation, coding platforms, professional email writing, and cybercrime prevention. Each task gave me practical exposure and helped me understand how digital tools can be used productively. This project not only improved my technical knowledge but also made me more responsible while using online resources. Overall, it was a valuable learning experience that will help me throughout my academic and professional journey.

Task 1:

Digital Literacy Infographic I created a digital literacy infographic using Canva, which is an easy-to-use design platform. The main goal of my infographic was to spread awareness about digital literacy among students. I included key topics such as the meaning of digital literacy, safe internet practices, and useful tools like Google Docs, GitHub, and email platforms. I focused on making the design simple, visually appealing, and easy to understand by using icons, colors, and short points instead of long text. One challenge I faced was organizing all the information in a limited space without making it look crowded. Choosing the right color combination and

font style was also slightly difficult because I wanted the infographic to look professional. However, this process helped me understand the importance of design thinking and clarity in communication. Overall, this task was interesting because it combined creativity with learning. It showed me how visual content can be more effective than plain text when explaining concepts. I also learned how to present information in a structured and engaging way, which will be useful in future academic and professional work.

Task 2:

Student Digital Portfolio For this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. These platforms are very important for building a professional digital presence. GitHub is mainly used to showcase projects and coding work, while LinkedIn helps in creating a professional network and connecting with industry professionals. Kaggle is useful for learning and practicing data science and analytical skills. Setting up these profiles helped me understand how important it is to maintain a professional identity online. I added my basic details such as education, skills, and interests. Although my profiles are simple right now, they form a strong foundation for future development. Over the next four years, I plan to regularly update these platforms by adding my projects, certifications, and achievements. I will also try to connect with professionals and participate in online communities to improve my knowledge and exposure. This task made me realize that having an online presence is not optional anymore but necessary for career growth. It will help me during internships, placements, and networking opportunities.

Task 3:

Coding & Collaboration Platforms In this task, I explored both coding and collaboration tools. I used HackerRank to solve a beginner-level programming problem, which helped me understand basic problem-solving

techniques. It was my first experience with a coding platform, and although it was slightly challenging, it was also very interesting and motivating. For the collaboration part, I created a Google Form that acts as a digital literacy awareness quiz. The form included different types of questions such as multiple-choice and short-answer questions. I also viewed the responses in Google Sheets, which helped me understand how data is collected and analyzed. These tools are extremely useful for students. Coding platforms like HackerRank improve logical thinking and programming skills, while Google Forms helps in collecting and organizing information efficiently. In the future, I plan to use these platforms regularly to enhance my technical knowledge and academic performance. This task helped me understand how technology can be used for both learning and collaboration in an effective way.

Task 4:

Email Etiquette Digital communication plays an important role in academic and professional life. One situation where poor communication can cause problems is when a student sends an email to a professor without a proper subject line, greeting, or respectful tone. Such emails may be ignored or misunderstood, leading to delays or negative impressions. In this task, I learned how to write professional emails with a clear subject, polite greeting, well-structured body, and proper closing. I also understood the importance of maintaining a respectful tone and being concise in communication. Good email etiquette reflects professionalism and creates a positive impression on the receiver. Additionally, I created a checklist of do's and don'ts for social media usage. This included being respectful, avoiding sharing personal information, and thinking before posting anything online. This task made me realize that digital communication is not just about sending messages but about communicating effectively and responsibly. These skills will be very useful in my academic journey and future career.

Task 5:

Cybercrime Awareness While researching cybercrime, I learned about different types of online threats such as phishing, UPI fraud, and identity theft. What surprised me the most was that many cybercrimes do not require advanced technical skills but instead rely on manipulating people. Scammers often create a sense of urgency or fear to trick individuals into sharing sensitive information. I realized that even small mistakes, such as clicking on an unknown link or sharing OTP details, can lead to serious financial or personal loss. This made me more aware of how important it is to stay alert while using digital platforms. One habit I will personally change is being more cautious before trusting any online message or link. Earlier, I did not always verify sources carefully, especially when messages seemed urgent. Now, I will take time to check the authenticity of emails, avoid suspicious links, and never share personal or financial information without proper verification. This simple change can significantly reduce the risk of becoming a victim of cybercrime.

Conclusion

This project helped me gain practical knowledge about digital tools, communication, and online safety. It improved my awareness and made me more responsible while using the internet. The skills I learned will help me in my academic journey and future career.
